

For a living planet

The update of the Greek Red Data Book of threatened fauna: Summary results and trends

Panagiota Maragou
Project coordinator
WWF Greece

Anastasios Legakis
Scientific coordinator
Zoological Museum
University of Athens

For a living planet

Project details

Beneficiary: Hellenic Zoological Society

WWF Greece: communication and awareness

The update of the Red Data Book is the result of the cooperation and work of many researchers, Universities, NGOs, institutes

Within the Operational Programme "Environment" 2000-2006, measure 5.2 "Environmental Awareness". Funded by 80% from EU resources and 20% from national funds

11th ICZEGAR, 21-25 September 2009

For a living planet

Project team

- Scientific coordination: T. Legakis, HZS
- Project coordination: P. Maragou, WWF Greece
- Group coordinators:
 - Terrestrial arthropods - T. Legakis (8)
 - Terrestrial mollusks - K. Vardinogiannis (2)
 - Marine arthropods - M. Kitsos (1+3)
 - Freshwater fish - P. Economides (2)
 - Marine fish - K. Papakonstantinou (4)
 - Amphibians - K. Sotiropoulos (3)
 - Reptiles - P. Lymberakis (9)
 - Birds - HOS (T. Kastritis, G. Handrinos) (43)
 - Mammals - A. Sfougaris (34)

For a living planet

What is a Red Data Book?

An **assessment** of a taxon's relative risk of extinction, with the main purpose of highlighting the taxa that are facing a higher risk.

Not a conservation measure but a priority-setting exercise.

The threatened status of animals is a widely used **indicator** for assessing the condition of ecosystems and their biodiversity.

8 categories and 5 main criteria groups
(*population size and trends, range, habitat quality, threats, life cycle*)

For a living planet

IUCN threat categories

EXTINCT (EX), EXTINCT IN THE WILD (EW)

There is no reasonable doubt that the last individual has died. A taxon is Extinct in the Wild when it is known only to survive in cultivation, in captivity or as a naturalized population (or populations) well outside the past range.

CRITICALLY ENDANGERED (CR)

A taxon that is considered to be facing an **extremely high risk** of extinction in the wild.

ENDANGERED (EN)

A taxon that is considered to be facing a **very high risk** of extinction in the wild.

VULNERABLE (VU)

A taxon that is considered to be facing a **high risk** of extinction in the wild.

For a living planet

IUCN categories

NEAR THREATENED (NT)

A taxon that does *not* qualify for a threat category now, but is close to qualifying for or is likely to qualify for a threatened category in the near future.

LEAST CONCERN (LC)

Widespread and abundant taxa.

DATA DEFICIENT (DD)

Inadequate information to make an assessment of the taxon's risk of extinction based on its distribution *and/or* population status..

NOT EVALUATED (NE)

For a living planet

Species Selection

- Protected, threatened (global, regional), endemics, ...
- Vertebrates: 453 species
 - 45 Marine fish
 - 131 Freshwater fish
 - 22 Amphibians
 - 64 Reptiles
 - 122 Birds
 - 69 Mammals
- Invertebrates: 394 terrestrial mollusks, 30 Araneae, 48 Isopoda, etc

For a living planet

Invertebrate species in a threat category

Cnidaria (1)

Mollusca Bivalvia (1)

Mollusca Gastropoda (166)

Araneae (30)

Isopoda (48)

Chilopoda (5)

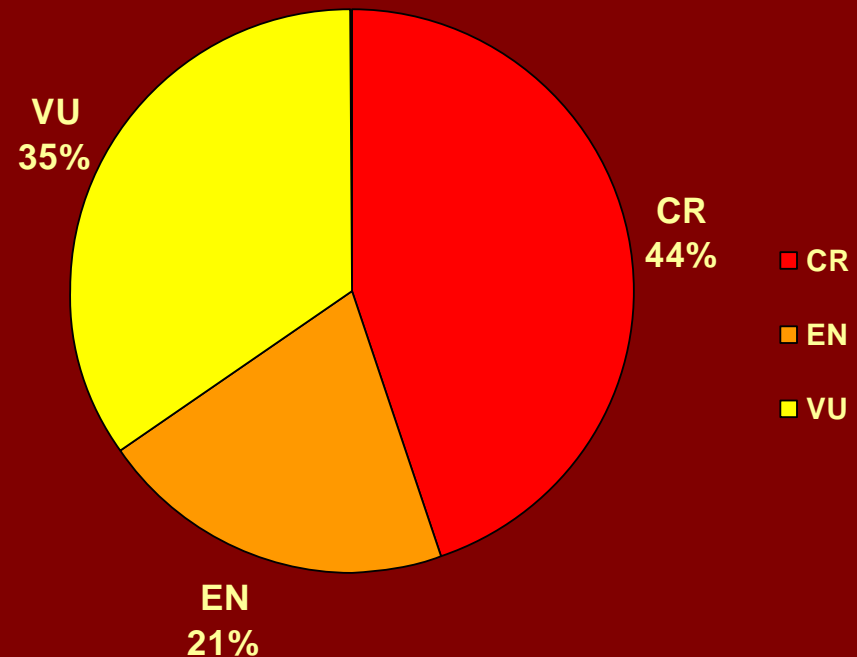

Odonata (4)

Orthoptera (2)

Lepidoptera (39)

Coleoptera (4)

Echinoderma (1)

For a living planet

Vertebrate species in a threat category

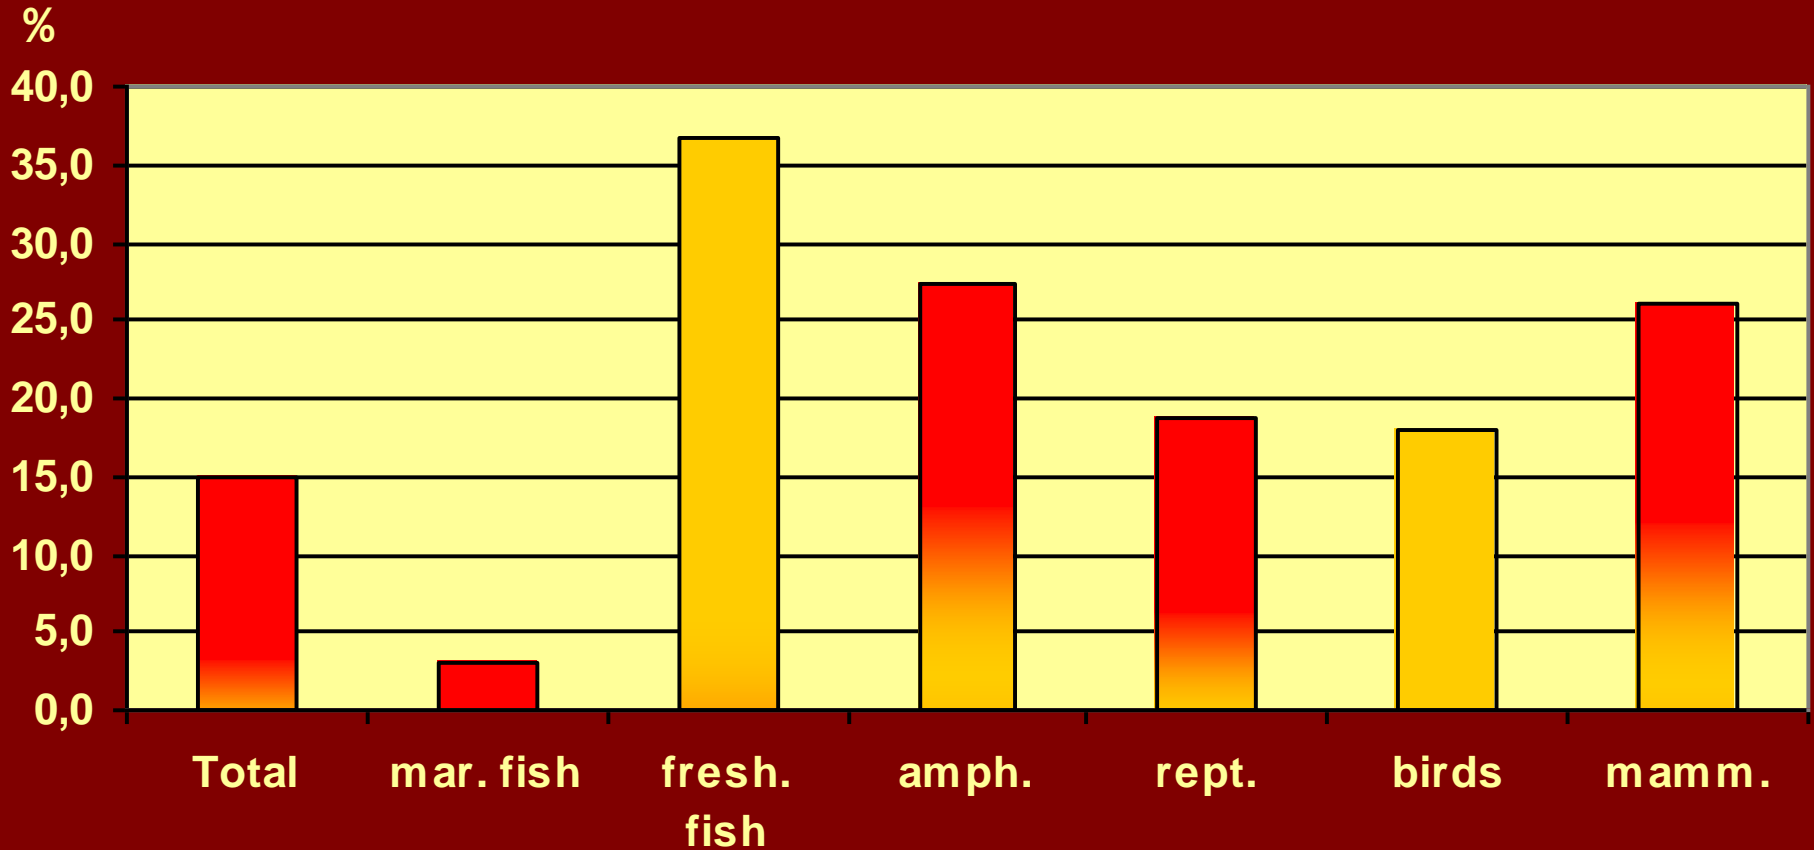

For a living planet

How many vertebrates are threatened?

For a living planet

No of species in threat category

For a living planet

Differences between groups

For a living planet

Criteria

- A: Reduction in population size
- B: Geographic range (area, fragmentation, habitat quality and/or extent, # of subpopulations)
- C: Number and trends of mature individuals
- D: Very small or restricted population
- E: Quantitative analysis showing the probability of extinction in the wild.

For a living planet

Main criteria used

			Unique criterion		
A	45	19%	27	11%	
B	93	39%	63	27%	
C	30	13%	10	4%	
D	70	29%	49	21%	
	238		149	63%	1 criterion
				37%	Multiple criteria

For a living planet

Main threats

Amphibians

Reptiles

Marine fish

For a living planet

Main management measures

- **Law & Policy**
 - Development of management plans
 - Implementation of legislation (esp. nationally)
- **Communication & awareness**
 - On value, importance, threat status
- **Research activities**
 - Biology & ecology, monitoring, threats
- **Site specific measures**
 - Designation and management of protected areas
- **Species specific**

For a living planet

During the last 17 years ...

- Different numbers & species
- Not possible to quantify changes
 - Different criteria
 - Increased knowledge
- Species with status change
 - Real change or previous lack of data
 - Changes in taxonomic status (e.g. *Rana*, *Podarcis*)
