GEOMETRY, ANALYSIS AND MECHANICS

edited by **John M Rassias** (*The National University of Athens*)

This review volume consists of articles by outstanding scientists who explore Archimedes' influence on the development of mathematics, particularly on Geometry, Analysis and Mechanics.

Contents:

- Towards the Ultimate Scheme for Numerical Integration in Multi-Dimensions (C D Angelopoulos & V D Angelopoulos)
- On a Simplified Quasilinear Equation of Elasticity Theory (L Berg & K Frischmuth)
- The Euler Formula for Polyhedra and Functional Equations (E Castillo & R Ruiz-Cobo)
- Relative Homotopy Groups in Unirational Homotopy Theory (P Cherenack)
- Discrete and Non-Discrete Phenomena in the Mixed Problem (C-Q Wu & Y K Liu)
- A WZ Proof of Ramanujan's Formula for π (Sh B Ekhad & D Zeilberger)
- Problems on the n Dimensional Simplex (K Hatada)
- The Two Squares Theorem (P Karagiorgis & K Markata)
- Archimedes and the Invention of Burning Mirrors: An Investigation of Work by Buffon (E Kreyszig)
- A Problem which Archimedes would Probably Like (S Tabachnikov)
- Open Problems in Analysis (J M Rassias)
- and other papers

Readership: Students and researchers in mathematics, mechanics and mathematical physics.
