

Algarotti, Fr. (1739), *Sir Isaac Newton’s Philosophy Explained for the Use of the Ladies in Six Dialogues on Light and Colours*, translated by Elizabeth Carter, 2 vols. in 1, London. [Originally published in Italian as Newtonianismo per le dame. Dialoghi sopra la luce, i colori, e l’attrazione, Napoli 1737.]

Atwood, G. (1776[?]), *A Description of the Experiments Intended to Illustrate a Course of Lectures, on the Principles of Natural Philosophy, Read in the Observatory at Trinity College, Cambridge*, London.

Atwood, G. (1784), *An analysis of a course of lectures on the principles of natural philosophy*, London.

Barker, M. (1674), *Natural theology, or, the knowledge of God from the works of creation; accommodated, and improved, to the service of Christianity*, London.

which had been supervised by the author. The English translation originally published along with the Latin text in 1922.

Boyle, R. (1674), The excellency of theology compar’d with natural philosophy, (as both are objects of men’s study) ... to which are annex’d some occasional thoughts about the excellency and grounds of the mechanical hypothesis, London.

Brisson, M. (1781), Dictionnaire Raisonné de Physique, tome I, tome II et tome III (planches), Paris.

Burnet, J. (1774), Of the origin and progress of Language, second edition with large additions and corrections, 6 vols., Edinburgh.

Burnet, T. (1726), The Sacred Theory of the earth, containing an account of the original of the earth and of all the general changes which it hath already undergone or is to undergo, till the Consummation of all things ... The sixth edition to which is added the author’s defence of the work from the Exceptions of Mr. Warren, and the Examination of Mr. Keil, 2 vols., London.

Casaubon, M. (1669), A letter of Meric Casaubon to Peter du Moulin, concerning natural experimental philosophie, and some books lately set out about it, Cambridge.

Charleton, W. (1699), The immortality of the human soul demonstrated by the light of nature, in two dialogues, London. Originally published in 1657 (The copy of Yale University Library has its date changed by hand to 1659).

Cheyne, G. (1705), Philosophical principles of natural religion, London.

Clarke, J. (1730), A Demonstration of Some of the Principal Sections of Sir Isaac Newton’s Principles of Natural Philosophy, in which His peculiar Method of treating that useful Subject, is explained, and applied to some of the chief Phaenomena of the System of the World, London. Reprinted by Johnson Reprint Corporation, New York 1972.

Clarke, S. (1718), A letter to Mr. Dodwell wherein all the Arguments in his Epistolary Discourse against the immortality of the SOUL are particularly answered, London (the fifth edition).

Comenius, J.A. (1651), Naturall philosophie reformed by divine light, or, A synopsis of physicks, London. Originally published as Physicae ad lumen divinum reformatae synopsis, Liepzig 1633.

Derham, W[illiam] (1786), Physico and Astro Theology; or a Demonstration of the Being and Attributes of God, a new edition in two volumes, London. [Physicotheology originally published between 1712 and 1714 (in 1714 appeared the second edition) and Astrotheology most probably in 1715.]

Desaguliers, J. T. (1717), Physico-Mechanical Lectures, or an Account of What is Explained and Demonstrated in the Course of Mechanical and Experimental Philosophy, London.

Desaguliers, J.T. (1719), *Lectures of experimental philosophy: wherein the principles of mechanicks, hydrostaticks, and opticks, are demonstrated and explained at large, by a great number of curious experiments*, London. [First published in 1719 by Paul Dawson and dedicated to Richard Steele without Desaguliers' knowledge; the title of this edition was *A system of experimental philosophy: prov'd by mechanicks. Wherein the principles and laws of physicks, mechanicks, hydrostatiks, and optiks, are demonstrated and explained at large, by a great number of curious experiments*. Republished in the same year by Desaguliers with a new title-page, preface and errata sheet added, under the current title (*Lectures of experimental philosophy...*).]

Desaguliers, J.T. (1724-1725a), “A Dissertation concerning the Figure of the Earth”, *Philosophical Transactions*, 33: 201-222.

Desaguliers, J.T. (1724-1725b), “The Dissertation concerning the Figure of the Earth Continued”, *Philosophical Transactions*, 33: 239-255.

Desaguliers, J.T. (1724-1725d), “An Experiment to illustrate What Has Been Said in the Philosophical Transactions, No 386, 387, 388 concerning the Figure of the Earth”, *Philosophical Transactions*, 33: 344-345.

Ditton, H. (1709), *The general laws of nature and motion; with their application to mechanicks. Also the doctrine of the centripetal forces, and velocities of bodies, describing any of the conick sections*, London. [Extracts.]

Euler, L. (1833), *Letters of Euler on different subjects in Natural Philosophy, addressed to a German Princess*. With notes and a life of Euler by David Brewster; containing a glossary of scientific terms; with additional notes by John Griscom. 2 vols., New York: J. & J. Harper.

’sGravesande, W.J. (1731), *Mathematical Elements of Natural Philosophy confirm’d by experiments*; or, *an Introduction to Sir Isaac Newton’s Philosophy*, translated into English by J.T. Desaguliers, the fourth edition, 2 vols., London. [The Latin original and the English translation by Desaguliers (as well as another English translation made by J. Keill) were all first published in the same year, 1720.]

Hale, M. Sir (1677), *Observations touching the principles of natural motions, and especially touching rarefaction & condensation: together with a reply to certain Remarks touching the gravitation of fluids*, London.

Hale, M. Sir (1695), *Magnetismus Magnus: or, Metaphysical and Divine Contemplations on the Magnet, or, Loadstone*, London.

Harris, J. (1736), *Lexicon technicum: or, an universal English dictionary of arts and sciences: ... In two volumes*. By John Harris, ... The fifth edition. Now digested into one alphabet: with very considerable additions and improvements ... Illustrated with several additional copper-plates, 2 vols, London [printed for J. Walthoe, Mess. Knapton, D. Midwinter, A. Bettesworth and C. Hitch, E. Symon, and 8 others in London].

Hobbes, T. (1678), *Decameron Physiologicum: or, ten dialogues of natural philosophy*. To which is added the proportion of a straight line to half the arc of a quadrant, London.

Hooke, R. (1674), *An attempt to prove the motion of the Earth from observations*, London.

Johnson, C. (1868), *The One Great Force: The Cause of Gravitation, Planetary Motion, Heat, Light, Electricity, Magnetism, Chemical Affinity, and Other Natural Phenomena*, Buffalo: Breed & Lent.

Keill, J. (1745), *Introduction to Natural Philosophy: Or Philosophical Lectures Read in the University of Oxford, Anno Dom. 1700, to which are Added, the Demonstrations of Monsieur Huygens’s Theorem, concerning the Centrifugal Force and Circular Motion*, London. [“The Fourth Edition, Translated from the last Edition of the Latin.” First latin edition of *Introductio ad veram physicam; seu Lectiones physicae habitae in Schola naturalis philosophiae Aca-
demiae oxoniensis before 1705. The English translation originally published before 1730.]

Lovett, R. (1766), Philosophical essays in three parts, Worcester.

Magalotti, Lorenzo, conte (1684), Essays of Natural Experiments made in the Academie del Cimento [= Saggi di naturali esperienze fatte nell’Academia del Cimento]. Written in Italian by the secretary of that academy; engli shed by Richard Waller, fellow of the Royal Society, London.

Martin, B. (1743), A course of lectures in natural and experimental philosophy, geography and astronomy: In which the properties, affections, and phenomena of natural bodies, hitherto discover’d, are exhibited and explain’d on the principles of the Newtonian philosophy, London.

Martin, B. (1754), A plain and familiar introduction to the Newtonian philosophy, London. [Extracts.]

Martin, B. (1759), A new and comprehensive system of mathematical institutions, agreeable to the present state of the Newtonian Mathesis, London: “A poem on the usefulness of mathematical literature”.

Martin, B. (1769), A panegyrick on the Newtonian philosophy: shewing the nature and dignity of the science, and its absolute necessity to the perfection of human nature; the improvement of arts and sciences, the promotion of true religion, the increase of wealth and honour, and the completion of human felicity, London.

Miller, S. (1781), An inquiry into the cause of motion, or, A general theory of physics: grounded upon the primary qualities of matter, London.

Motte, A. (1727), A treatise of the mechanical powers. Wherein the laws of motion, and the properties of those powers are explained and demonstrated in an easie and familiar method, London.

van Musschenbroek, P. (1744), The Elements of Natural Philosophy. Chiefly intended for the Use of Students in Universities, by Peter van Musschenbroek, M.D., Professor of Mathematicks and Philosophy in the University of Leyden. Translated from the Latin by John Colson, M.A. and

Nollet, abbé, J.A. (1738), Programme ou Idée Générale d’un Cours de Physique Expérimentale, Paris.

Nollet, abbé, J.A. (1748), Lectures in experimental philosophy, translated by John Colson, London. Original title: Leçons de physique expérimentale. First published in Paris, in 6 vols, from 1743 to 1748. [As far as I know, only the first volume was translated into English.]

Nollet, abbé, J.A. (1753), Lettres sur l’ Électricité, dans lesquelles on examine les derneres Découvertes qui ont été faites sur cette Matiere, et les conséquences que l’on en peut tirer, Paris.

Nollet, abbé, J.A. (1767), Lettres sur l’ Électricité, dans lesquelles on trouvera les principaux phénomens qui ont été découverts depuis 1760, avec des discussions sur les conséquences qu’on en peut tirer. Troisieme partie, Paris.

Parker S. (1681), A demonstration of the divine authority of the law of nature and of the Christian religion, London. [Reproduction of original in University of Chicago Library. Pages 55-60 faded in filmed copy. Pages 44-69 photographed from Yale University Library copy and inserted at the end.]

Pemberton, H. (1728), A view of Sir Isaac Newton’s Philosophy, Dublin.

Rutherforth, T. (1754), *Institutes of Natural Law*, Being the Substance of a Course of Lectures on Grotius De Jure Belli et Pacis, vol. I in which are explained the rights and obligations of mankind considered as individuals, Cambridge.

Rutherforth, T. (1756), *Institutes of Natural Law*, Being the Substance of a Course of Lectures on Grotius De Jure Belli et Pacis, vol. II in which are explained the rights and obligations of mankind considered as members of civil societies, Cambridge.

Sergeant, J. (1697), *Solid Philosophy asserted, against the fancies of the Ideists*: or, the Method to Science farther illustrated. With reflexions on Mr. Locke’s Essay concerning human understanding, London.

Simpson, T. (1757), Miscellaneous tracts on some curious and very interesting subjects in mechanics, physical-astronomy and speculative mathematics, London.

Whiston, W. (1755), *A new theory of the earth, from its original to the consummation of all things. Wherein the creation of the World in six days, the universal deluge, and the general conflagration, as laid down in the Holy Scriptures, are shewn to be perfectly agreeable to Reason and Philosophy*, London. [The first edition.] [The sixth edition, “to which is added, an appendix, containing a new theory of the Deluge”.

Wilkins, J. (1649), *A discourse concerning the beauty of Providence in all the rugged passages of it*, London.

Wilkins, J. (1693), *Of the principles and duties of natural religion*, London. Probably the 3rd edition; originally published in 1675 (?).
