## **HOMEWORK SOLUTIONS**

- Categorize the infinitives in (3) by following the instructions below:
  - Mark the infinitive <u>as it is base-generated</u> with brackets.
  - Are the bracketed constituents ECM, raising, subject or object control infinitives?
- **(1)** I considered [Mary to be the only suitable candidate].

ECM

Will you try [to see the movie]?

subject control

c. Not many happened [to know the answer].

raising

- d. Bill convinced her [to meet around 9].
- object control ('split control') subject control

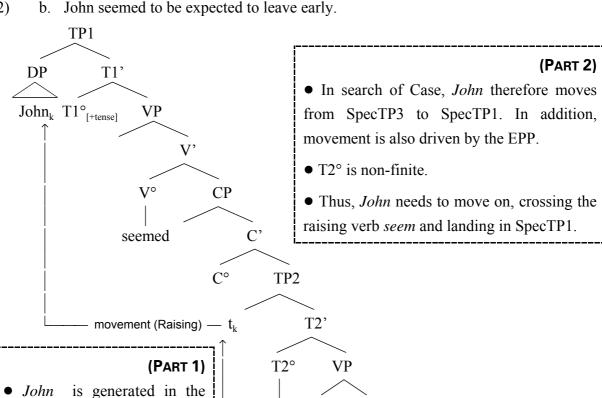

e. A visitor wanted [to see her]. The wind started [to bother them]. f.

raising

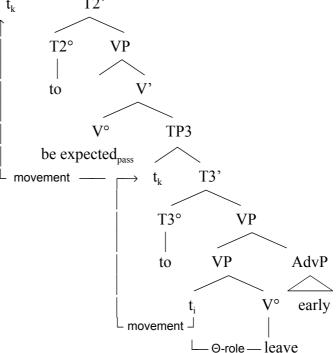

They wanted [every guest to fill out a separate form]. g.

ECM

(2)

- lowest SpecvP and moves to SpecTP3 (driven by the EPP).
- expected is an ECM verb, which can in principle assign Case to the subject of the embedded clause.
- But *expected* is passivized. Thus, it looses its ability to assign accusative to SpecTP3.

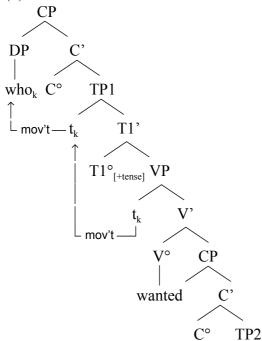

(2) c. Who wanted to continue to force the settlers to buy his goods?

PRO<sub>k</sub>

T2°

to

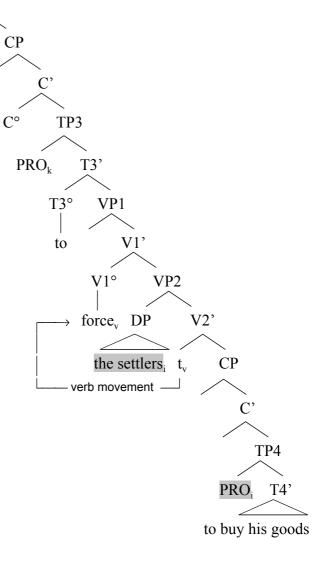

(PART 2)

- PRO<sub>k</sub> in SpecTP2 controls PRO<sub>k</sub> in SpecTP3. Subject control, induced by *continue*.
- The trace of *who* in SpecTP1 controls  $PRO_k$  in SpecTP2. This is an instance of subject control, triggered by the subject control verb *wanted*.
- *Who* moves to SpecCP (question formation by wh-movement).

## (PART 1)

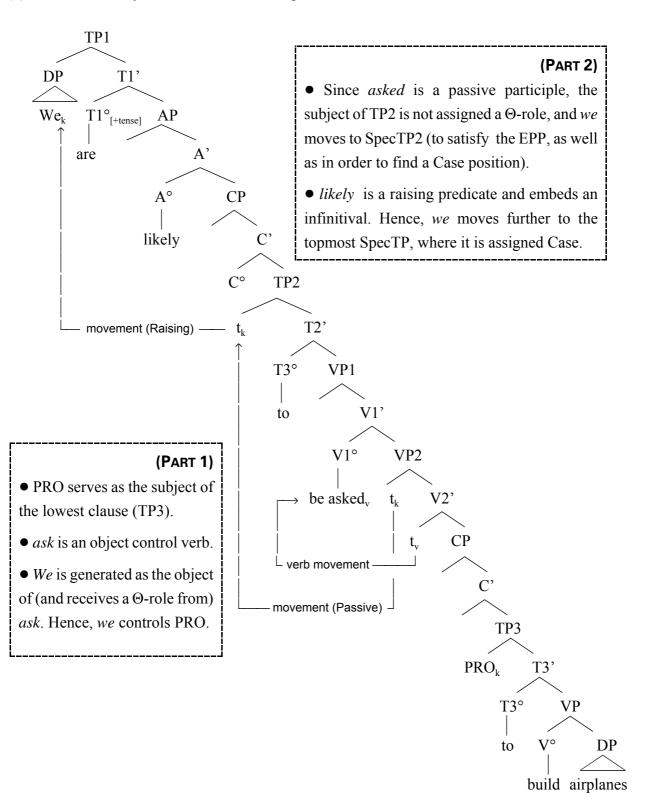

continue

- The object *the settlers* and the object clause are located in a VP-shell, guaranteeing c-command from the controller to PR.
- *force* moves from the lower to the higher V-position.
- force is an object control verb. Hence, the settlers controls PRO<sub>i</sub> in SpecTP4.

3 SYNTAX II

(2) d. We are likely to be asked to build airplanes.

LECHNER, SOSE 2006 4

## **FAQS & CAVEATS**

• How can one determine whether a verb is an object control verb or an ECM predicate?

**ANSWER**: There are criteria, but we did not cover them in class. The best strategy is to remember the core cases of ECM - everything else is object control.

• Typical ECM verbs: believe, consider, expect, make out, imagine, report, reckon

• Some object control predicates: persuade, convince, ask, tell, order, admonish, beg,

challenge, coax, command, encourage, order, entreat, implore, inspire, instruct, invite, train, urge,

warn,...

• Careful with want! The verb is ambiguous:

(1) She wants them arrested ECM

(2) She wants to arrest arrest them subject control
