Table of contents

Plenary Presentations

<i>Ackermann K.E.</i> Programming For The Natives: What is it? What's In It For The Kids?	1-10
<i>Clayson J.E., Noss R.</i> Café philo at Constructionism 2012	11-15
<i>Eisenberg M.</i> Constructionism: Changes in Technology, Changes in Purpose	16-22
<i>Goldenberg E.P.</i> Constructionism and the confirmation of a reluctant constructivist or Why, in American mathematics education, talk of constructivism is “out,” talk of constructionism never really happened, and it might not really matter anyway	23-32
<i>Harvey B.</i> The Beauty and Joy of Computing: Computer Science for Everyone	33-39
<i>Kynigos C.</i> Niches for Constructionism: forging connections for practice and theory.	40-51
<i>Resnick M.</i> Mother's Day, Warrior Cats, and Digital Fluency: Stories from the Scratch Online Community	52-58
<i>Sherin B.</i> Constructionism and the new learning analytics	59-68

Panel Debates

<i>Kynigos C., Clayson J.E.</i> Panel Debates: Rationale	69
Leader <i>Wilkerson-Jerde M.</i> Panel - debate 1: Changing the subject	70
Leader <i>Blikstein P.</i> Panel - debate 2: Segregation for ever?	71
Leader <i>Goldenberg P.</i> Panel - debate 3: How do we know it when we see it?	72
Leader <i>Valente J.</i>	73

Research Reports

Constructionist Classroom Experiences

<i>Oldenburg R., Rabel M., Schuster J.</i> A Turtle's genetic path to Object Oriented Programming	74-82
<i>Paparistodemou E., Meletiou-Mavrotheris M.</i> Children's Reasoning about Samples and Sampling in a Project-Based Learning Environment	83-93
<i>Papademetri-Kachrimani C.</i> Is this Constructionism? A case of young children, mathematics and powerful ideas.	94-103
<i>Stager S. G.</i> Friends of Papertian Constructionism	104-114
<i>Worsley M., Blikstein P.</i> A Framework for Characterizing Changes in Student Identity during Constructionist Learning Activities	115-125
<i>Sacristán A.I, Jiménez-Molotla J.</i> The Continuing Story of the Painless Trigonometry Projects: Eratosthenes' method and the Parthenon	126-135
<i>Zantzou I., Kynigos C.,</i> Differential approximation of a cylindrical helix by secondary school students	136-145
<i>Papadopoulos I.</i> Nicodemus explores Egyptian fractions: A case study	146-155
<i>Liarakou G., Daskolia M., Papanikolaou A.</i> Children Learning about 'Urban Sustainability' through Playing and Re-constructing a Half-Baked Microworld	156-165
<i>Fuhrmann T., Greene D., Salehi S., Blikstein P.</i> Bifocal Biology: The Link Between Virtual and Real Experiments	166-173
<i>Moustaki F., Kynigos C.</i> Meanings for 3d mathematics shaped by on-line group discussion	174-183
<i>Markopoulos C., Alexopoulou E.</i> Representational systems on 3d navigation process	184-193
<i>Daskolia M., Kynigos C.</i> Tinkering Creatively with Sustainability	194-203

Constructionism and the Curriculum

<i>Campos F.</i> Science, Education and Technology: Robotics in the curriculum at schools in Brazil	204-210
<i>Ó Dúill M.</i> Towards Turing Teaching	211-220
<i>Skiadelli M.</i> Interactive Board Games in classroom	221-230
<i>Kim K.H., Song M.H.</i> Building the System of Designing Own Mathematics Textbook	231-239
<i>Ó Dúill M.</i> Back to the Future: Can we reverse a quarter-century of regression?	240-249

Constructionism in Teacher Education Programs

Preface

Constructionism 2012 in Athens carried on the tradition of the bi-annual meetings of the Eurologo community in Dublin (1987), Gent (1989), Parma (1991), Anavissos (1993), Birmingham (1995), Budapest (1997), Sofia (1999), Linz (2001), Porto (2003), Warsaw (2005) and Bratislava (2007) and Paris (2010). Our highly successful meeting in Paris in 2010 was characterized by the change in our title to 'Constructionism' in order to delineate our head - on addressing of and reflection on our constructionist epistemology on learning and using Logo-like digital systems.

It was also remembered for the broadening of learning domains from mathematics and programming to the arts. Permeating our discussions was the feeling that in 2012, it is time to look at and to question Constructionism in the future, to discuss the associated learning theory in a world where connections and integration is sought in a landscape of fragmented theoretical frameworks and constructs. What has constructionist learning theory to offer in our understanding of how and what we learn? It was felt that it is equally time to reconsider constructionism as a theory of pedagogical design and practice.

In a world where educational reforms and wide scale initiatives are becoming more pertinent and where curriculum materials and management systems crop up at unprecedented scale, availability and variety, how can constructionists have an impact? How can we make use of new media and how can we describe our designs and our practices to be convincing and relevant? The theme of our 2012 conference, 'Theory, Practice and Impact' was thus meant to reflect our on-going discussions and provide challenge for our meeting in Athens which we hope you all enjoyed.

CONFERENCE CHAIRS

Prof. Chronis Kynigos

Prof. James Clayson

Using the “D-stage” Kit to develop 2d Science Microworlds

Educational Technology Lab, School of Philosophy, Department of Pedagogy

“D-stage” is designed by ETL as a “kit” for developing 2d Science Microworlds. “D-stage” is a “microworld kit” in the sense that it allows researchers, teachers and students to use it as a template and create a set of 2d Microworlds for simulating phenomena defined by Newtonian or other types of scientific Laws. Designing and constructing new microworlds using the “D-stage” kit, the students have the opportunity to explore the physics laws that underpin the phenomena they wish to simulate and create new and complicated situations to experiment with.

To develop their microworlds the students have at their disposal: a) an area where they may insert objects and observe the simulated phenomena – the “Stage”, b) an area where the Properties or Behaviours of the objects appear in the form of sliders (angle, length, mass, radius, delay) – the “Attributes” area, c) an area where the GUI handlers are placed (e.g. the START button) – the “Control” area, d) an area where the values of specific Properties or Behaviours appear in a vector form, e) a Logo Editor for programming the Properties, the Behaviours and the relationships between the objects that appear on the Stage.

When opening the kit, the Stage already hosts only one object programmed to move like a projectile. Making it move in different ways is just a matter of changing the initial conditions through the sliders or changing specific parts of the LOGO Program that underpin its motion. Adding new objects at the Stage is also quite simple for the designer of microworld. The Logo code that controls the behaviour of the already existing object can be copy-pasted and linked to the new object.

In this poster, we will attempt to highlight University students’ designing processes as they developed 2d half-baked Microworlds (Kynigos, 2007), using the “D-Stage” kit. We specifically focus on which functionalities of the kit they use and how they connect their design choices with pedagogical and epistemological underpinnings.
